

HIPAA PRIVACY TRAINING MODULE

VERIFY → IDENTIFY → DECIDE → RESPOND

Mission Briefing (2 Minutes)

Welcome, Agent!

When handling sensitive healthcare calls, members or representatives can become demanding or distressed. To successfully protect PHI/PII while delivering top-tier service, every agent must master the 4-step de-escalation framework:

1. Acknowledge the concern.
2. Demonstrate empathy.
3. Clarify the issue following appropriate process (HIPAA verification & minimum necessary).
4. Provide the solution compliant with security rules.

Start Mission

Mission 1 - HIPAA Verification (2 Minutes)

Read each scenario and select the agent path that correctly executes all four framework steps.

Scenario 1: The Urgent Records Call

Caller: 'I need my medical records sent to my personal email right now! My name is John Doe, and I'm in a rush.'

Path A (Flawed Script): 'Alright Mr. Doe, I understand you are in a rush. Let me open your account and email those medical files directly to your personal email address right now.' [-100 Points (Compliance Breach - Skipped verification and disclosure compliance process)]

Path B (4-Step Verbatim Script): 'I hear your urgency regarding your medical records [Acknowledge], and I completely understand how important it is to get this sorted quickly [Empathize]. To follow our security policy and protect your account, I just need to verify 2 to 3 unique identifiers before I can process this request [Clarify process]. Once verified, I will securely transmit the allowed documentation to your authorized file [Provide solution].' [+100 Points (Correct - Flawlessly executes Acknowledge, Empathize, Clarify, and Solve)]

Mission 2 - PHI vs. PII (2 Minutes)

System Prompt: As an agent, how do you handle an internal audit query distinguishing Protected Health Information (PHI)?

Path A (Process Execution): Acknowledge the reporting deadline, empathize with data security pressures, clarify definitions by separating PII from health data, and correctly isolate member names tied to active diagnoses as PHI [Provide solution]. **[+100 Points (Correct - Proper compliance categorization workflow)]**

Path B (Flawed Execution): Randomly lump names and zip codes together as PHI without checking definitions. **[-50 Points (Incorrect - Fails to clarify data standards)]**

Mission 3 - Allowed vs. Restricted Disclosure (2 Minutes)

Caller: 'Hello! I live down the street. Can you tell me if my neighbor, Mary Smith, is still admitted in Room 302?'

Path A (Flawed Script): 'Let me check the room roster for you... Yes, Mrs. Smith is still in Room 302. She is resting comfortably.' **[-500 Points (Severe Breach - Unauthorized disclosure violation)]**

Path B (4-Step Verbatim Script): 'I understand you are checking in on your neighbor [Acknowledge], and it is kind of you to care about her wellbeing [Empathize]. However, under federal HIPAA privacy regulations, our standard process prohibits us from confirming or denying patient presence to outside callers [Clarify process]. Therefore, I cannot disclose room locations or status, but I can direct you to general visitor guidelines if needed [Provide solution].' **[+200 Points (Correct - Protects privacy using the full 4-step framework)]**

Final Challenge & Certification (2 minutes)

Live Call Scenario: An aggressive caller claims to be an authorized 'Personal Representative' and demands you immediately read out both the financial billing statement and confidential clinical diagnosis notes over the phone.

Required Agent Verbatim Script (4-Step Applied): 'I hear your frustration and the urgency behind your demand [Acknowledge], and I completely understand why you want all details sorted right away [Empathize]. However, under our HIPAA verification and Minimum Necessary Standard process, while your profile is authorized for financial statements, we must pause and verify if your documentation explicitly covers clinical diagnosis records [Clarify process]. I can review and read the billing statement details for you right now, but we will need to submit a separate review for clinical notes verification [Provide solution].'

Wrap-up

Total your points to claim your badge:

500+ Points: Privacy Defender Badge (Master of 4-Step De-escalation & HIPAA Compliance)

300–499 Points: PHI Protector Badge (Strong Proficiency with Minor Framework Adjustments)

Below 300 Points: Compliance Trainee (Mandatory review of ODUK Quick Reference Panel)

VERIFY → IDENTIFY → DECIDE → RESPOND
